Trouble	Reasons	Solution
No alarm when triggered in the locked mode	1. Battery cover is loose. 2. The cable is not pushed in far enough. 3. Vibration detect function is off	1. Tighten screws securely in the cover. 2. Make sure the cable is plugged in lock hole and deep enough 3. Set off the vibration detect function when belongings are easily moved by others
No vibration detect function	1. Vibration detect function is off. 2. The strength of vibration is low	1. Check whether the vibration detect function is on 2. More than 0.6 kilogram impact force will cause the vibration
Can't unlock	1. Wrong password 2. Low battery 3. Lock bar gets stuck	1. Check whether the password entered is correct. 2.Check battery, when battery voltage is low, change new batteries, alkaline battery is suggested. 3. Check whether the lock bar gets stuck
Can't lock	1. Low battery 2. Lock bar gets stuck	1. Check battery, when battery voltage is low, change new batteries, alkaline battery is suggested. 2. Check whether the lock bar gets stuck

1. In order to reduce risks and losses, change new batteries immediately, when battery voltage is low. If you do not use the unit for a long time, please remove the battery to avoid battery leakage.
2. If ice or sleet is accumulated on the lock remove ice near the lock bar, this may cause the lock bar get stuck.
3. The lock does not have a memory. If the battery is changed or is discharged ,the password and setup will reset to initial factory setting(factory setting password '1234',vibration detect function is on) Please reset the password as soon as possible.
